## REQUEST FOR REFUND

Request for Refunds - Latrice Sims Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Ms. Sims:

Applicants' attorneys are in receipt of their Monthly Statement of Deposit Account 18-0013, dated August 2005. In particular, an entry in the Statement is for posted August 25, 2005, for Serial No. 10/697,747, Docket No. 65856-0041, which was charged for fee code 1253 in the amount of \$1,020.00. A copy is enclosed as Attachment 1. This was an overcharge.

On August 22, 2005, Examiner Dirk Wright telephoned Applicants' attorneys indicating no response was received to date for Serial No. 10/697,747. The response to the Office Action dated February 23, 2005 was sent via facsimile on May 23, 2005, on the deadline date. A copy of Auto-Reply Facsimile Transmission is enclosed as Attachment 2. Examiner Dirk Wright asked us to send a copy of the previously faxed response along with the return confirmation from the United States Patent and Trademark Office, which we did. A copy is enclosed as Attachment 3. The charge appears to be with respect to the date of resubmission and not the timely original submission.

BEST AVAILABLE COP

Application No.: 11/039,704

Docket No.: 50000-0069

Applicants' attorneys request a refund in the amount of \$1,020.00 to be credited to Deposit Account 18-0013, under Order No. 65856-0051 for the overcharged amount.

Dated: September 20, 2005

Respectfully submitted,

Michael B. Stewart

### AMENDMENT IN RESPONSE TO NON-FINAL OFFICE ACTION

MS Amendment Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

#### INTRODUCTORY COMMENTS

In response to the Office Action dated Pebruary 23, 2005, please amend the above-identified U.S. patent application as follows:

Amendments to the Claims are reflected in the listing of claims which begins on page 3 of this paper.

Remarks/Arguments begin on page 6 of this paper.

#### AMENDMENTS TO THE CLAIMS

1. (Currently Amended) A method for predicting a destination gear in a controller-assisted, manually shifted vehicular transmission system, said method comprising the steps of:

determining an expected front box gear; and

determining whether an intended shift is a compound shift, and if so, a destination gear is predicted based on a shift lever lateral position, both a partial and a full shift lever fore-aft position, and a splitter switch position.

- 2. (Original) The method of Claim 1, whereby the destination gear is equal to the expected front box gear when the splitter switch position is in a Low position, the shift lever fore-aft position is in one of a partial aft position and a full aft position, and the shift lever lateral position is in one of a High position and a Center position.
- 3. (Original) The method of Claim 1, whereby the destination gear is equal to the expected front box gear when the splitter switch position is in a Low position, the shift lever fore-aft position is in one of a partial fore position and a full fore position, and the shift lever lateral position is in 1<sup>st</sup>/Reverse position.
- 4. (Original) The method of Claim 1, whereby the destination gear is equal to the expected front box gear when the splitter switch position is in a Low position, the shift lever fore-aft position is not in one of a partial fore position and a full fore position, and the shift lever lateral position is in 1<sup>st</sup>/Reverse position.
- 5. (Original) The method of Claim 1, whereby the destination gear is equal to the expected front box gear plus one when the splitter switch position is in a High position, the shift lever fore-aft position is in one of a partial aft position and a full aft position, and the shift lever lateral position is in one of a High position and a Center position.

- 6. (Original) The method of Claim 1, whereby the destination gear is equal to the expected front box gear plus one when the splitter switch position is in a High position, the shift lever fore-aft position is in one of a partial fore position and a full fore position, and the shift lever lateral position is in a 1<sup>st</sup>/Reverse position.
- 7. (Original) The method of Claim 1, whereby the destination gear is equal to the expected front box gear minus one when the splitter switch position is in a High position and the shift lever fore-aft position is not in one of a partial fore position and a full fore position, and the shift lever lateral position is in a 1<sup>st</sup>/Reverse position.
- 8. (Original) The method of Claim 1, whereby the intended shift is determined to be a compound shift based on the shift lever fore-aft position and the splitter switch position.
- 9. (Original) The method of Claim 1, whereby the controller uses the predicted destination gear for engine control.
- 10. (Original) The method of Claim 9, further comprising the step of determining whether the predicted destination gear is greater than a last known gear.
- 11. (Original) The method of Claim 10, further comprising the step of determining whether a current gear is equal to zero when the predicted destination gear is greater than the last known gear, and if so, commanding the engine to a zero torque mode, and if not, commanding the engine to a recovery mode.
- 12. (Original) The method of Claim 10, further comprising the step of determining whether a downshift is allowed when the predicted destination gear is not greater than the last known gear.
- 13. (Original) The method of Claim 12, further comprising the step of commanding the engine to a synchronize mode when the downshift is allowed.

- 14. (Original) The method of Claim 13, further comprising the step of determining whether a current gear is equal to zero, and if not, commanding the engine to a recovery mode.
- 15. (Original) The method of Claim 14, whereby the engine is commanded to a follower mode when the recovery mode is complete.
- 16. (Original) The method of Claim 1, whereby the controller uses the predicted destination gear for splitter control.
- 17. (Currently Amended) A controller-assisted, manually shifted vehicular transmission system comprising an internal combustion engine driving an input shaft of a compound transmission having a multiple-ratio main section shifted by a shift lever manually movable in a shift pattern and a splitter auxiliary section connected in series with said main section, a splitter shift mechanism for automatically implementing splitter shifts and a controller for receiving input signals indicative of system operating conditions and for processing same according to predetermined logic rules to issue command output signals to system actuators, including said splitter shift mechanism,

wherein said controller includes logic rules for:

determining an expected front box gear; and

determining whether an intended shift is a compound shift, and if so, a destination gear is predicted based on a shift lever lateral position, both a partial and a full shift lever fore-aft position, and a splitter switch position.

- 18. (Original) The transmission of Claim 17, wherein the controller determines the intended shift to be a compound shift based on the shift lever fore-aft position and the splitter switch position.
- 19. (Original) The transmission of Claim 17, wherein the controller uses the predicted destination gear for engine control.

Docket No.: 65856-0051

### REMARKS

Applicant has carefully reviewed the Office Action mailed February 23, 2005, and thanks Examiner Wright for his detailed review of the pending claims. In response to the Office Action, Applicant has amended claims 1 and 17. By way of this amendment, no new matter has been added. Accordingly, claims 1-20 remain pending in this application. Applicant respectfully requests reconsideration of the present application in view of the above amendment and the following remarks.

## Claim Rejections Under 35 U.S.C. § 102

Claims 1-20 are rejected under 35 U.S.C. 102(b) as being anticipated by *Hughes* '171. Applicants respectfully traverse the rejection.

To anticipate a claim, the reference must teach every element of the claim. A claim is anticipated only if each and every element as set forth in the claim is found, either expressly or inherently described, in a single prior art reference. Verdegaal Bros. v. Union Oil Co. of California, 814 F.2d 628, 631, 2 USPQ2d 1051, 1053 (Fed. Cir. 1987). The identical invention must be shown in as complete detail as is contained in the ... claim. Richardson v. Suzuki Motor Co., 868 F.2d 1226, 1236, 9 USPQ2d 1913, 1920 (Fed. Cir. 1989).

Independent claims 1 and 17 respectively recite a method and a control system logic for predicting a destination gear in a transmission system where "both a partial and a full shift lever fore-aft position" is used in the determination of whether an intended shift is a compound shift. In support of this limitation, the Examiner's attention is directed to paragraph [0074], 1<sup>st</sup> sentence, and paragraph [0061], 1<sup>st</sup> and 2<sup>nd</sup> sentences, to illustrate that both the partial fore position 210 and the full fore position 208 are detected prior to determining shift intent.

Hughes does not teach the controller-assisted transmission system of the present invention. Specifically, Hughes teaches detecting only a single fore-aft position of the shift lever, and not "both a partial and a full shift lever fore-aft position". In addition, the present invention accomplishes both a compound shift and a lever shift without the complexity of Hughes where force sensors 57, 58 and a plunger 82 are used to ensure that the proper gear is selected and maintained.

Application No.: 10/697,747

Docket No.: 65856-0051

Dependent claims 2-16 and 18-20 teach independently patentable subject matter, although they are also patentable by being dependent on an allowable base claim. As an example, claim 12 recites "determining whether a downshift is allowed when the predicted destination gear is not greater than the last known gear." These teachings are not taught in the prior art of record. Accordingly, reconsideration and withdrawal of this rejection is respectfully requested.

## **CONCLUSION**

In view of the above amendment and remarks, the pending application is in condition for allowance. If, however, there are any outstanding issues that can be resolved by telephone conference, the Examiner is earnestly encouraged to telephone the undersigned representative.

It is believed that any additional fees due with respect to this paper have already been identified in any transmittal accompanying this paper. However, if any additional fees are required in connection with the filing of this paper that are not identified in any accompanying transmittal, permission is given to charge our Deposit Account No. 18-0013, under Order No. 65856-0051 from which the undersigned is authorized to draw.

Dated: May 23, 2005

Respectfully submitted.
